

Switches - TECHNICAL CHARACTERISTICS

Switches with directional arrows

These switches can be used for the direct control of motor driven loads, i.e. roller blinds, gates, etc.

The switches, which are operated by push buttons, may be associated to relays to control motor driven loads by pulses, i.e. roller blinds, gates, etc.

Key-operated switches

These switches are particularly suitable to prevent outsiders from unauthorized operations.

Two kinds of key-operated switches are available: switches with the same lock and key (unified code 000), which allows the user to operate all the switches with the same key; switches with different locks and keys, to restrict the possibility of operations according to particular needs of the users.

They are all delivered with two keys. The key is removable when the switches are either in the ON or in the OFF position.

By request the switches can be supplied with the key removable in the ON position only.

IMPORTANT

Vimar has a range of 100 different combination keys used at random in every produced lot, this guaranteeing that each packing unit of 20 pieces will be provided with 20 different combination keys.

Switches

Switch with directional arrows 250 V~

16140	.B	1P 10 AX switch (3 terminals) with directional arrows and central OFF position
16145	.B	2P 10 AX switch (6 terminals) with directional arrows and central OFF position
16150	.B	1P 10 A 2-way push button (3 terminals) with directional arrows and central OFF position
16155	.B	2P 10 A 2-way push button (6 terminals) with directional arrows and central OFF position
