

SMART SOLUTIONS FOR BUILDINGS

Welcome to smart buildings.

Nowadays a simple gesture is enough for every space to become smart, communicating with you and supporting your desires in real time, wherever you are. How? Thanks to an evolved platform system which enables every system in a specific building to be coordinated and integrated through innovative technologies, efficient but especially easy to use. This is VIEW, Vimar Energy on Web, a constantly growing ecosystem of interconnected systems and smart products, intended to represent the Vimar perspective on the new digital world and on the Internet of Things.

A smart life accurate in every detail.

VIEW answers in a concrete way to the diverse demands of someone who designs, realizes and really lives the spaces. VIEW ensures that a building in order to be really welcoming should be smart too. A wide range of interconnected professional systems, intended for both new projects and important renovations, which converge in the integrated platform VIEW IoT smart systems. Single connected devices, dependable and high-performing are allocated to the refit of existing systems. An integrated, completed and plain approach which unifies smart solutions to a design of great aesthetic appeal.

Connectivity, simplicity of integration and design: these are the advantages of our solutions.

Connectivity

THE HIGHEST FREEDOM OF CONTROL..

Thanks to the local connectivity and cloud connections, everything turns out to be completely manageable from everywhere with the highest level of simplicity and security: a programmable electronic device, an elegant touch screen surface mounted, a smartphone or a voice assistant. Our solutions offer the advantage of being provided with an inbuilt intelligence (Edge) that guarantees system reliability even when there is no connection to the cloud.

Always connected with your world.

With the VIEW app you can manage all your spaces through smartphone or tablet. Personalize and control all functions (surfing through the environment), create scenarios, configure the cameras, receive videocalls and notifications about your home's status. Thanks to the skills provided to the principal vocal assistant producers, the building answers to your voice too. And you are always connected with your world.

With an unlimited assistance.

The integrated Vimar system, thanks to the cloud support, can be managed and reconfigurable also remotely. Because of the intuitive app View Pro the installer can provide real time assistance for every kind of maintenance or update. The adoption of the most advanced standards concerning cybersecurity in the domain of IoT guarantees the absolute certainty that only authorized people can access the system.

Simplicity

COMPLETE CONTROL THROUGH A SINGLE POINT OF MANAGEMENT.

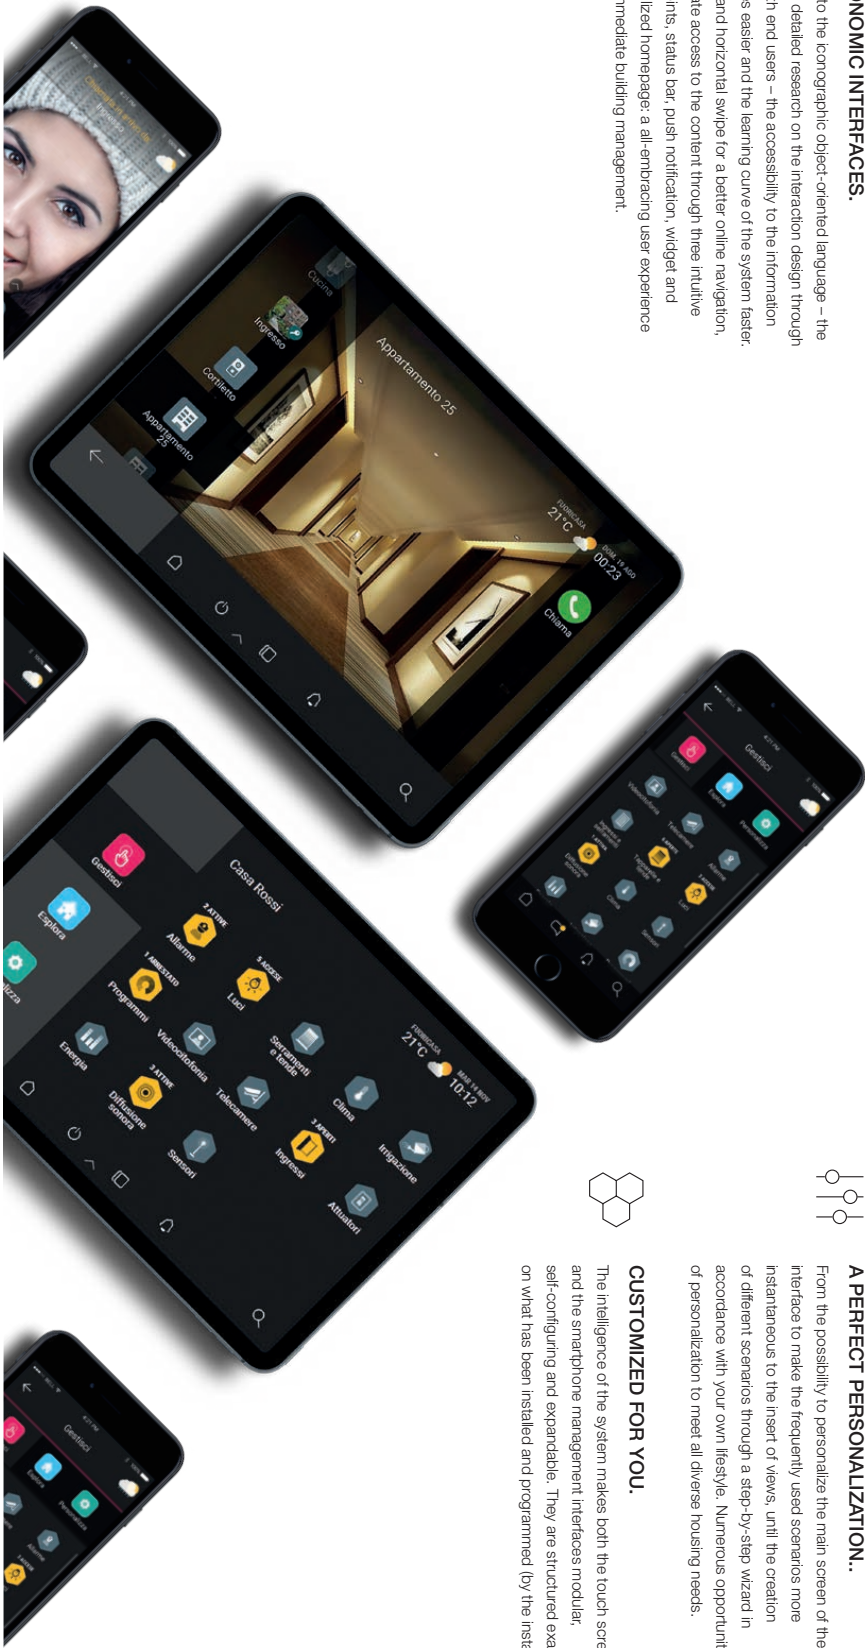

All functions in the building can be managed locally and with immediacy through elegant touch screens. Available in diverse dimensions, with a personalized interface completely based on simple icons specifically designed to make every operation fast and intuitive. The same interface can be found also in the control app through smartphones or tablet, making the system user experience homogeneous and ergonomic.

ERGONOMIC INTERFACES.

Thanks to the iconographic object-oriented language – the result of detailed research on the interaction design through tests with end users – the accessibility to the information becomes easier and the learning curve of the system faster. Vertical and horizontal swipe for a better online navigation, immediate access to the content through three intuitive entry points, status bar, push notification, widget and personalized homepage: a all-embracing user experience for an immediate building management.

A PERFECT PERSONALIZATION..

From the possibility to personalize the main screen of the interface to make the frequently used scenarios more instantaneous to the insert of views, until the creation of different scenarios through a step-by-step wizard in accordance with your own lifestyle. Numerous opportunities of personalization to meet all diverse housing needs.

CUSTOMIZED FOR YOU.

The intelligence of the system makes both the touch screen and the smartphone management interfaces modular, self-configuring and expandable. They are structured exactly on what has been installed and programmed (by the installer).

Integration

AN INTERCONNECTED SYSTEM GIVES YOU GREAT ADVANTAGES.

By-me Plus, By-alarm, Elvox door entry system, Elvox CCTV and Elvox Gates are five evolved systems which interact with each other through the platform IP View IoT Smart Systems in order to provide the maximum in terms of comfort, energetic efficiency and security. Intelligent solutions dialogue with one another and with the commercial proposals of other manufacturers to offer evolved, interconnected and customized functionalities.

To experience the living spaces at their best.

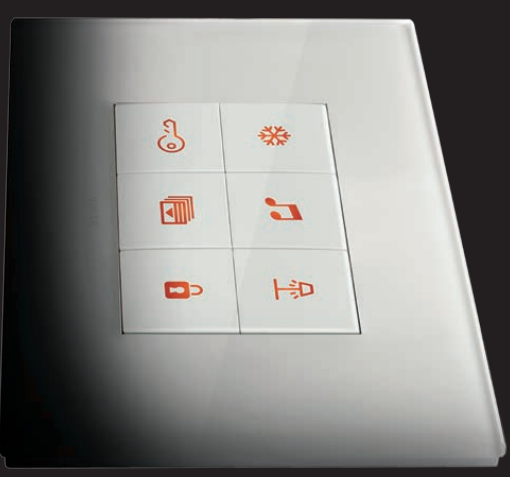

COMFORT

ENERGY EFFICIENCY

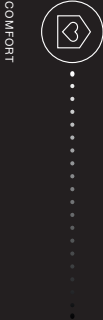

SECURITY

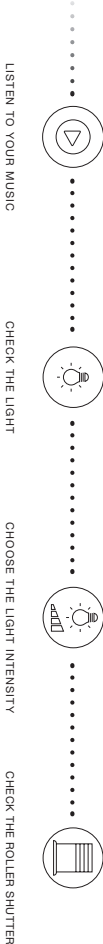

THE COMFORT YOU ARE LOOKING FOR, JUST LIKE YOU WANT.

With By-me Plus, our smart automation system dedicated to comfort and energetic efficiency, you can turn any space into an oasis of well-being where it's always possible to find again the preferred environmental conditions. Its evolved and intuitive technology controls the speaking system, manages the lighting and command the automations, making your wishes a reality also through scenarios created to meet your demands.

THE IDEAL ATMOSPHERE ON YOUR COMMAND.

You are at home and you want to take a moment of relax with the right atmosphere? You can choose the **light intensity**, enjoy the **cromotherapy**, control the **roller shutter** at the desired position while **listening to your favourite song**, recalling a **gentle scenario**.

MORE WELL-BEING, LESS CONSUMPTION.

With By-me Plus it is possible to control the climate in a smart way, managing the thermic system with a centralized way, programming every zone with a time period, controlling the consumption in real time – water and gas too – and reporting the possible exceeding of optimal values. The system organizes cleverly the energy from a photovoltaic plant and can prevent the blackout due to an overload by disconnecting non-priority loads. These solutions manage an energy savings between 30% and 60% depending on implemented functions (according to data from the Polytechnic University of Milan IoT Observatory and to the EN15232 regulation)

ENERGY EFFICIENCY

THE CLIMATE IS PERFECT AND THE ENERGY OPTIMIZED.

Imagine a hot and sunny summer day. You just want to **freshen your house**. The system is capable of directing the energy from a photovoltaic plant toward the **air-conditioner** obtaining the **optimal temperature freely**, while respecting the environment and the energy consumption.

Up to 30%
in less
on energy
costs.

SET UP THE TEMPERATURE

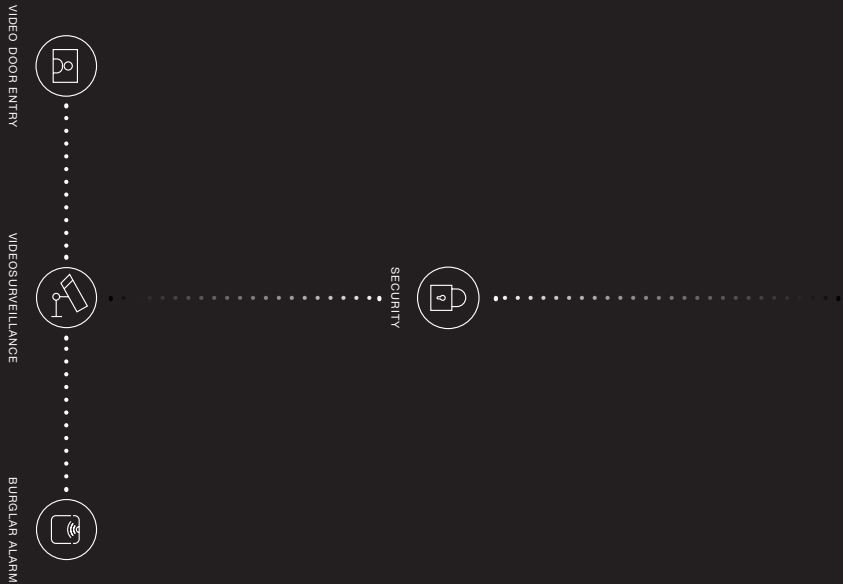

VERIFY THE ENERGY PRODUCTION

CHECK YOUR CONSUMPTION

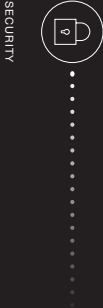

Security is guaranteed.

Spaces protected by breaking and entering, always under the cameras control, where the dialogue with the external world is carried out safely thanks to internal and external video door entry places and to the possibility to manage the access in an easy and immediate way. And what if you are not there? With the View app you can control everything through smartphone wherever you are.

VIDEO DOOR ENTRY SYSTEM AN OVERVIEW ON THE EXTERNAL WORLD.

Recognize who rings at the doorbell wherever you are and to communicate clearly are fundamental elements to live safely. Our solutions for the video door entry system, based on Due Fill Plus and IP technology, integrate themselves perfectly into the View IoT platform smart system, turning smartphones and touch into real smart video door entry units.

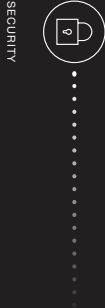

ANSWER ALSO WHEN YOU
ARE NOT AT HOME.

While you are running some errands you **receive a videocall** from the babysitter who is ringing the doorbell because she forgot her key for the gate. Through the View app you can **talk with her, you can let her in and you turn the external lights** on so that she can get into the building.

VIDEO SURVEILLANCE AND
BURGLAR ALARM SYSTEM THE
SECURITY IS GUARANTEED.

If you want to assure a complete supervision of your spaces with a precise coverage for every detail our video surveillance systems offer a wide range of products that happens to operate in any kind of environmental condition. To protect the building from any kind of breaking and entering, the intrusion detection By-alarm system represents the ideal solution, easily expandable over time and with a wide range of devices ready to offer a protection adapted to your real needs.

A REMOTE CONTROL OF YOUR
SPACES.

You are not at home and you receive an **alert notification** on your smartphone. With the VIEW app you can **turn on the video camera display** focused on the alarmed zone to understand what is going on: don't worry, it is only the neighbor who is trying to fetch his sons ball which randomly came into your garden. You can just **disable the alarm** and let him in!

Design

AESTHETIC COORDINATION IS COMPLETE.

All our smart solutions express a perfect bond between design and technology. Elevated performances coordinate themselves with different styles of our wiring devices with the aim of satisfying the most specific and aesthetic needs. A constant attention that has led to the most prestigious awards in this industry.

Eikon, Arké, Plana.

They personalize energy.

Three different aesthetic solutions, developed with the most famous designers, to adapt to every building's architectural style. A wide range of cover plate – available in a great variety of materials, colours, shapes and finishes – and control devices with RGB backlighting that offer an aesthetic coordination with the display of electronic thermostats.

EIKON

Value and refinement. This is EIKON: a series in which every kind of beauty, even the technological one, finds its highest expression. Its flawless aesthetic has discovered also a new shape of energy: Eikon Exé: the purity of shapes meets the charm of the material.

PLANA

Essential in its formal rigor but characterized by a lively brilliance. Plana is ideal to add value to every room and space, thanks to fascinating materials like the Reflex, and a wide range of colours, versatile with every match.

ARKÉ

Defined by a precise identity, Arké is the solution to today's needs: a simple but contemporary item, with a timeless design. The new colouring Metal for buttons and controls follows the brand new trend which prefers the match of hot metals and natural metals.

Wireless controls
without battery.
Lighting is smart too.

Wireless controls – without battery and wires- are perfectly coordinated with the wiring series Elkon, Arké and Plana and they can be arranged everywhere without building works or wall painting. This is a smart solution which is able to integrate perfectly with any kind of living environment, it is ideal for building renovations, change of the intended use or of the furniture, and for all those installations subjected to architectural or regulatory constraints.

THE LIGHT ENTERS INTO A NEW ERA.

Wireless devices, available with different technologies, interface perfectly with the products of the most important players of the lighting industry allowing a direct control of smart lamps.

TARGETTI

Smart products and life becomes easier.

These products - independent from the installation of other systems and provided with an integrated Wi-Fi - are both easy to install and intuitive to use. They offer evolved functions, with the aim of satisfying the most specific needs of modern living. They guarantee a control from smartphone through specific apps.

EVOLVED AND CONNECTED DEVICES.

With the Wi-Fi thermostat it is possible to set up and manage the climate at home in an intuitive and simple way remotely through smartphone. TAB 7S, it is not only a simple video door entry unit but also a smart device which gives the opportunity of receiving videocalls, answering and activating specific functions remotely. Evolved solutions to manage the building through dedicated apps. As you want and whenever you want.

Advantages dedicated to the most specific needs.

A SINGLE INTERLOCUTOR.

Whatever your need is, we can give you a precise answer. Thanks to a professional team, we are able to support you with competence and to offer you complete and personalized solutions to automate, connect and watch the house, with an aesthetic coordination of all installed devices.

COMPLETE OFFER.

With a product range of more than 12,000 items – three wiring series, home & building automation systems, video door entry system, burglar system, automation for gates and road barriers – we are able to completely cover plant engineering requirements, both for the exterior and interior of the building, offering technological reliability, ease of installation and the maximum user-friendliness.

ONLINE SUPPORT.

On our website, you can find whatever you need to evaluate our proposals. Dedicated documentation, technical and plant engineering information, design service and detailed product sheet.

WORLDWIDE PRESENCE.

We have a worldwide presence with sales branches and distributors around the globe.

This widespread network enables us to provide after-sales consultancy and assistance anywhere, supporting every need with total professionalism, even in markets with different regulatory standards.
